

Introduction

This web application designed for particular need of the company to carry out its operations in a smooth and effective manner. This web application is reduced as much as possible to avoid errors while entering data. It also provides error message while entering invalid data like email. It is user-friendly as no formal knowledge is required to use the system. It has two users. The registered employee of the company and the admin who can be either the employee arranged by company to manage the the system or he can be the owner of company. The admin has special username and password to enter. which he should know in advance. For employees it's their employee id followed by name(ex. 123Minaxi).

USERS:

Admin

The Admin gets logged in by valid username and password. Admin can view all employees, add new Employee, add new Department, approve/cancel employee leave request, calculate salary for the employees(based on leave and bonus).

Employee

The Employee can logged in with employee id and id and name together as password. He can view/print the salary receipt , apply for leave, edit some of his personal details like phone number or address.

Technologies used:

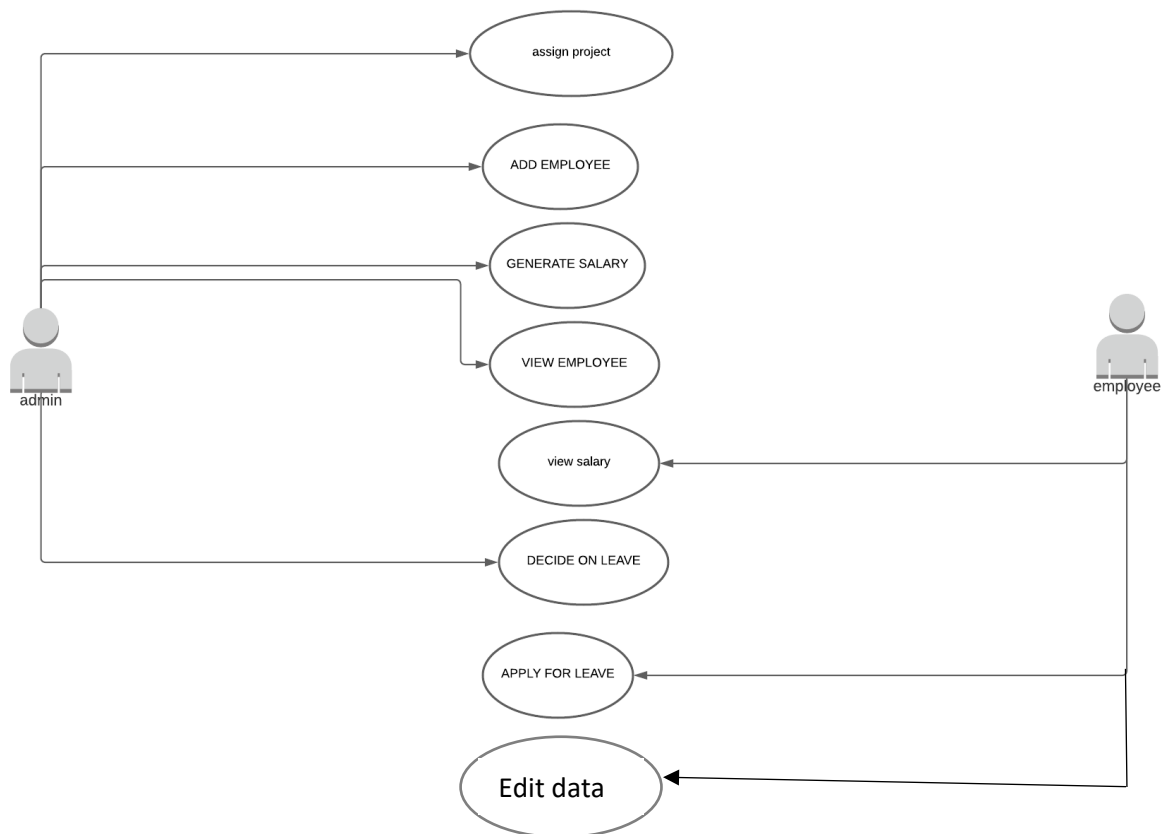

Languages: HTML, PHP, CSS

Database : MySQL

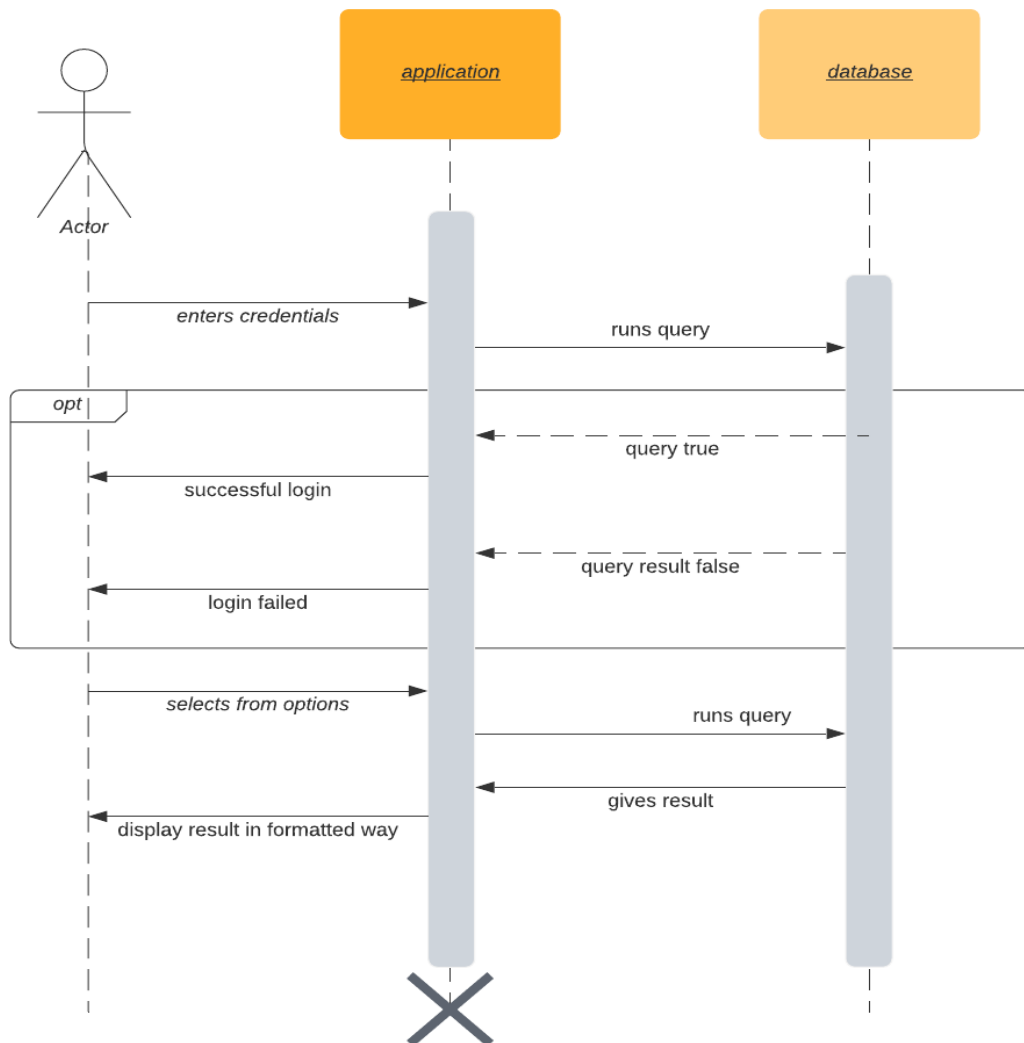

Web Server: WAMP server Development

Platform: Neatbeans
